Elevating Electricity

“Our first priority is to make electrical needs the last of your concerns.”

Electrical Assurance

At Converse Electric, we don't just have high standards for the work we do – we raise the bar on what it means to be a reliable electrical contractor. We're a locally based, third-generation family owned business. And we've been providing electrical assurance to Greater Columbus for over 50 years.

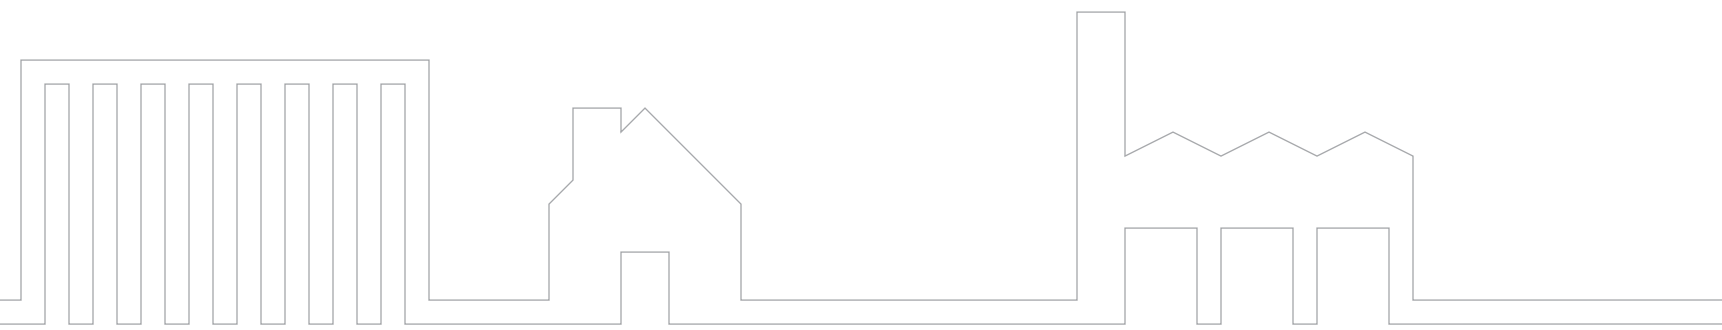

Where does our long history of assurance come from? It comes from going above and beyond expectations, displaying the highest level of technical expertise, and paying close attention to the details others often miss. It's also a result of consistently delivering on our estimates, adjusting our schedules to meet every deadline, and guaranteeing our work for up to a year.

The Converse Difference

What do we do better than anyone else? We treat every project as if it were our own. We deliver solutions that are scalable for future needs. We provide unmatched in-the-trenches experience. After all, our president isn't just a businessman, but an electrician by trade. And while other electrical contractors often go over budget or deliver less than promised, we stand by our word – and our work.

Converse Electric isn't a corporation where staff is just a number. We consider every employee an important part of the Converse family. Naturally, this extends into the way we treat our customers too. That's because we don't just work to complete electrical jobs, we work to build and keep relationships. By promoting communication and doing what we say we'll do, we ensure our clients always feel informed and never out of the loop.

Our High Standards Span All Industries.

Commercial

Whether it's a hospital, office or shopping center, business success depends on reliable power. You name it, Converse Electric can provide it: accurate estimating and budgeting, followed by professionally installed lighting, power distribution, and grounding. We also wire fire alarm systems, security systems and sound systems—for new construction as well as remodels.

Our attentive project managers ensure all commercial building projects run according to plan, utilizing field laptops and custom Web-based programs that sync with our estimating department's records. Plus, our diverse skill set includes expert Design & Build. Relying on AutoCAD training, our engineers complete every electrical design to unique requirements—all while ensuring efficiency and faster delivery.

Residential

Building new construction housing or completing remodels can be a cumbersome task. So being able to rely on trusted electrical services is more important than ever. Our residential customers know they can always count on us to help them create the most attractive and comfortable atmospheres.

For over five decades, we've been on call 24 hours a day—knowing that residential electrical emergencies can happen at any time. We're also at the forefront of energy-saving technologies, educating our customers on solutions that help them reduce consumption. What's more, our residential customers appreciate that we're always dressed in professional attire and drive fully stocked, clean vans equipped for all projects.

Industrial

Keeping manufacturing moving and limiting electrical downtime is another area of Converse expertise. No matter what your company produces, you can be assured we're tooled to get every industrial job done right. From estimation to implementation, our project managers, technicians and engineers are there to help build reliable infrastructures, conduct electrical repair, and relocate high-voltage machinery.

Whether you need to install new electrical lines or keep existing ones running smoothly, you'll be armed with cost- and energy-saving strategies without experiencing downtime. Plus, you'll have peace of mind knowing we can fulfill your service and maintenance needs after the job is complete. We have our own bucket and line trucks, so work that involves extra equipment is no problem. And you can call on us 24/7 for any emergency electrical repair.

Delivering excellent electrical service isn't just about completing a job to code. It's about following our own code of higher standards.
