

Resilience™

Exceptional Resistance To Moisture

**Rain or dew in the forecast?
Resilience lets you paint with confidence.**

PREMIUM EXTERIOR ACRYLIC LATEX

Why let rain or dew slow you down? Resilience resists moisture 50% faster than other coatings.

Painting jobs postponed because the forecast calls for rain? Painting stops early in the day because of concern about dew forming? Not anymore. With Resilience Premium Exterior Paint, the threat of rain or dew will not slow down or delay the job.

Resilience is specially formulated with breakthrough MoistureGuard™ technology, resisting moisture twice as quickly as standard exterior latex coatings. Newly painted exteriors develop

resistance to moisture in just two hours rather than the four-hour minimum most coatings require.

Resilience is the perfect choice for residential and commercial exteriors no matter what the forecast because it has excellent hide and a lifetime limited warranty. It is available in flat and satin and can be applied in temperatures as low as 35°F so crews can work later in the season too.

Resilience Key Benefits

**Recommendation: Apply two coats of Resilience for residential repaints; a primer and two topcoats for new construction. It can be brushed, rolled or sprayed on masonry, concrete, steel, stucco and wood.*
